BOAT SERVICE LIFT

Boat Service Lift (BSL) is a new Floating Dock System for boat lifting introduced by Italia Marine of Viareggio - Italy.

Main Features and Benefits

The BSL offers Yard and Marinas operators a highly versatile and environmentally friendly option for quick boat inspections (Boat down-time dramatically reduced).

This system, requires non cranes, hoists or trolley supports, can lift vessels weighing up to 20 tones safely out of the water for hull and propulsion system checks and repairs (Save time and cost for boat maintenance).

The BSL also benefits from low maintenance costs as its structure is manufactured from galvanized steel framework and high density polyethylene. Running costs are practically zero (less than 0.8kW/hr per lift) and pollution is avoided due to a solid-liquid extraction containment system (Lower purchase and installation costs in comparison to other traditional lifting system).

Takes up no land space and does not require permanent installation on the quayside (Easy to use).

Dimensions and technical data

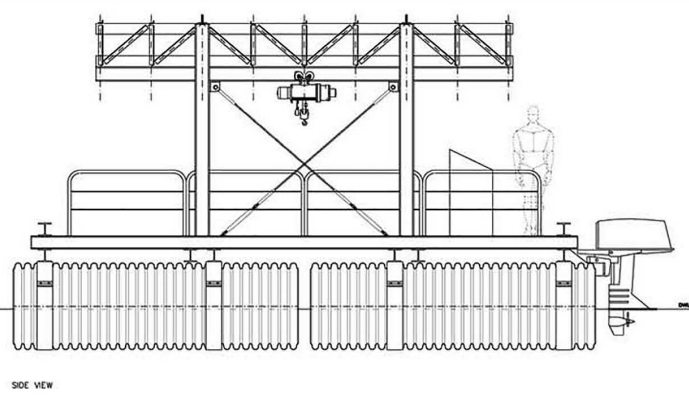

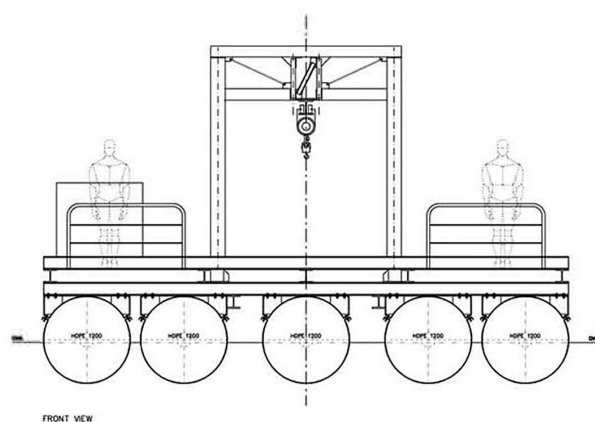

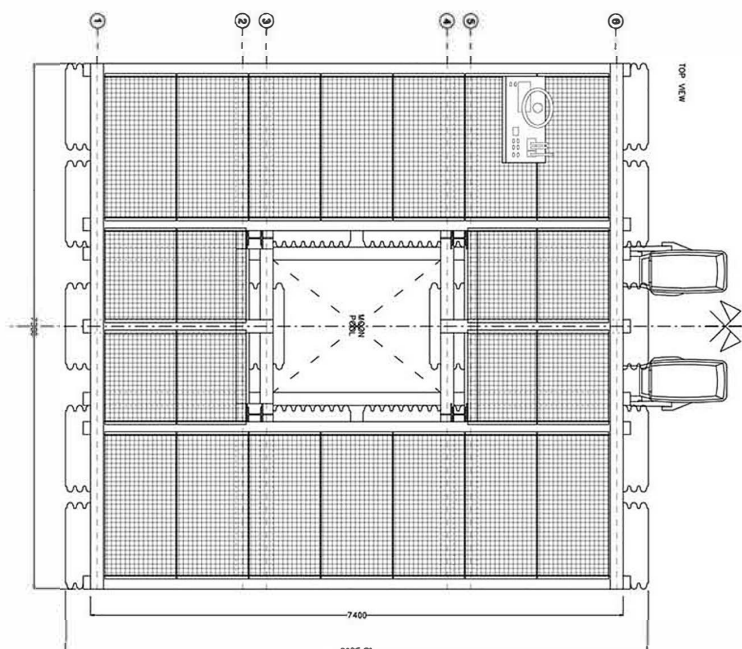

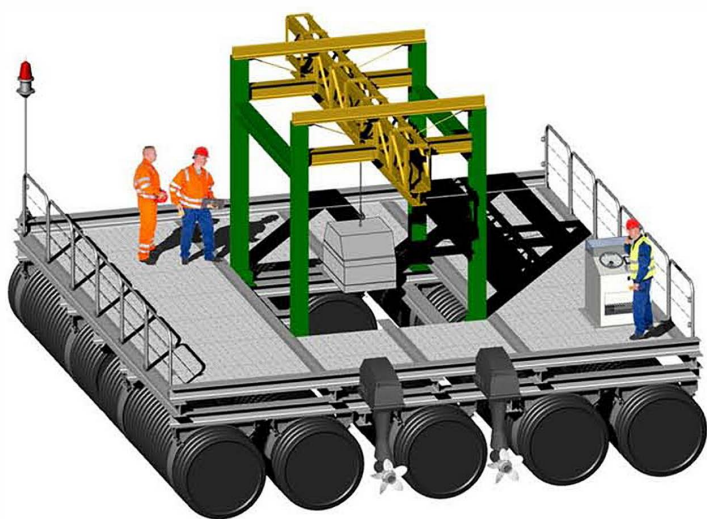

- Width: 7.80 m
- Length: 18,50 m
- Weight: 23 t
- Maximum Volume: 62 t
- Maximum Barycentric Load: 20 t
- Diving time: estimated 20 m

Accessories

- Collection system with containment and aspiration tank for the collection of production waste.
- Pressurized water distribution system for power washer
- Compressed air supply system for the use of pneumatic tools
- Underwater lighting system

PORT SERVICE BARGE

Dimensions and technical data:

- Width: 7,30m
- Length: 8,10m
- Weight: 10t
- Maximum Barycentric: 12t
- Made from: High density polyethylene (floating parts) and hot dip galvanized steel (structure)

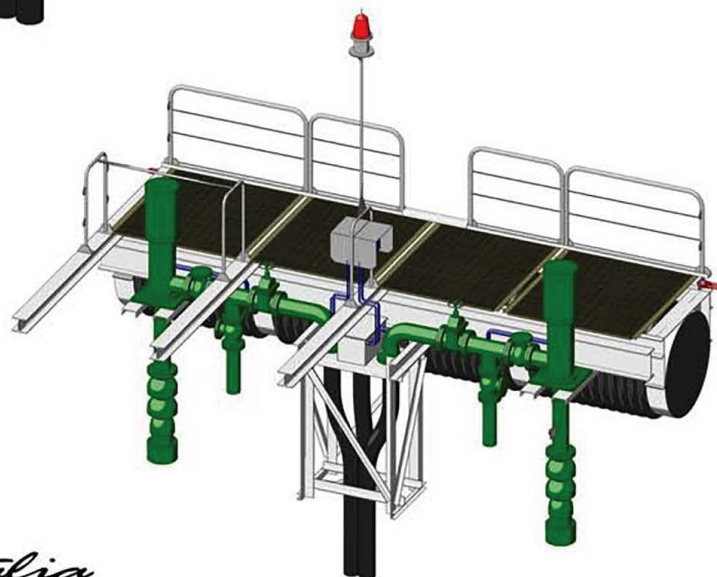

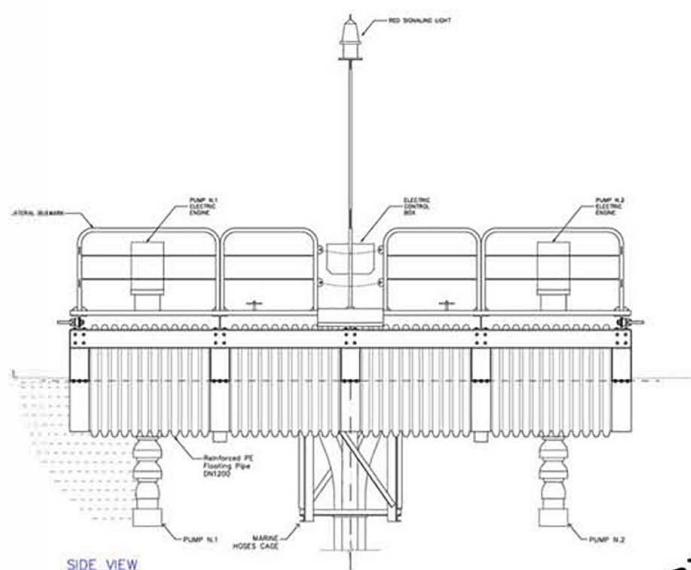

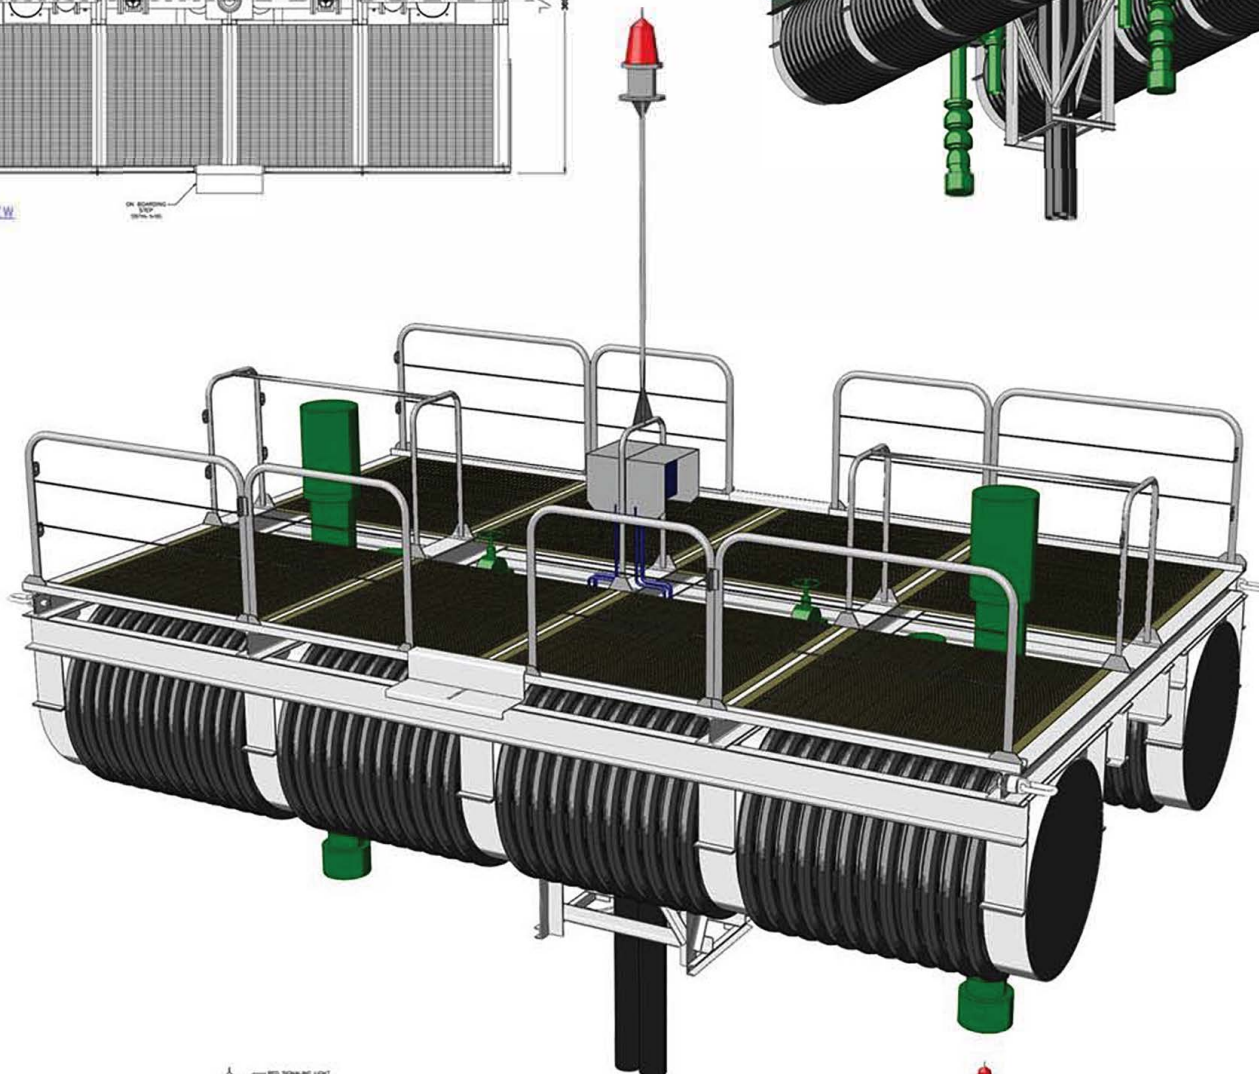

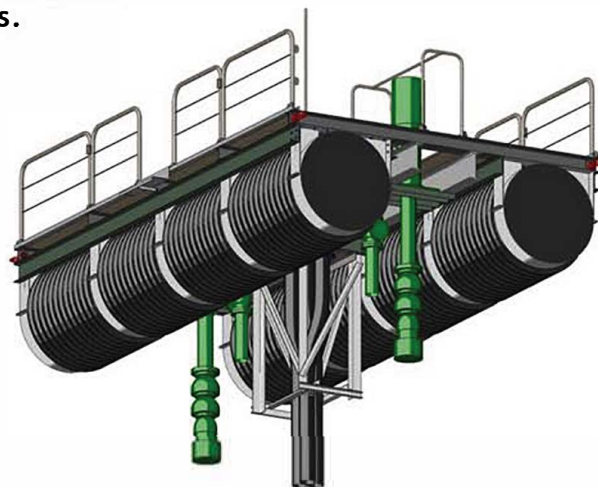

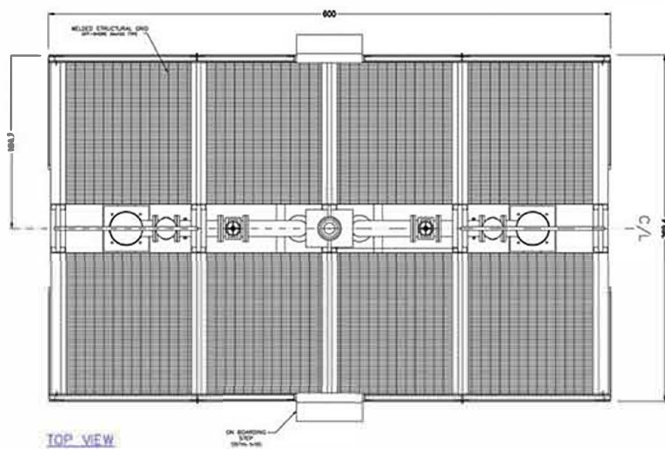

Accessories:

- Underwater lighting system;
- Outboard engines;
- Ballast systems;
- Winches;

PORT SERVICE BARGE (PSB) offers Port and Marinas operators a highly versatile option for quick transport and maintenance of mooring post and catenary within the port or marina area. The PSB can lift and carry mooring post weighing up to 3 tones. The PSB also benefits from low maintenance costs as its structure is manufactured from galvanized steel framework and high density polyethylene. Each PSB is equipped with winch and can be towable or motorized with outboard engines. Easy to use, can be used by a single operator.
